## 12. North American Free Trade Agreement.

- (a) Goods originating in the territory of a party to the North American Free Trade Agreement (NAFTA) are subject to duty as provided herein. For the purposes of this note--
- (i) Goods that originate in the territory of a NAFTA party under the terms of subdivision (b) of this note and that qualify to be marked as goods of Canada under the terms of the marking rules set forth in regulations issued by the Secretary of the Treasury (without regard to whether the goods are marked), and goods enumerated in subdivision (u) of this note, when such goods are imported into the customs territory of the United States and are entered under a subheading for which a rate of duty appears in the "Special" subcolumn followed by the symbol "CA" in parentheses, are eligible for such duty rate, in accordance with section 201 of the North American Free Trade Agreement Implementation Act.
  - (ii) Goods that originate in the territory of a NAFTA party under the terms of subdivision (b) of this note and that qualify to be marked as goods of Mexico under the terms of the marking rules set forth in regulations issued by the Secretary of the Treasury (without regard to whether the goods are marked), and goods enumerated in subdivision (u) of this note, when such goods are imported into the customs territory of the United States and are entered under a subheading for which a rate of duty appears in the "Special" subcolumn followed by the symbol "MX" in parentheses, are eligible for such duty rate, in accordance with section 201 of the North American Free Trade Agreement Implementation Act.
- (b) For the purposes of this note, goods imported into the customs territory of the United States are eligible for the tariff treatment and quantitative limitations set forth in the tariff schedule as "goods originating in the territory of a NAFTA party" only if--
- (i) they are goods wholly obtained or produced entirely in the territory of Canada, Mexico and/or the United States; or
  - (ii) they have been transformed in the territory of Canada, Mexico and/or the United States so that--
    - (A) except as provided in subdivision (f) of this note, each of the non-originating materials used in the production of such goods undergoes a change in tariff classification described in subdivisions (r), (s) and (t) of this note or the rules set forth therein, or
    - (B) the goods otherwise satisfy the applicable requirements of subdivisions (r), (s) and (t) where no change in tariff classification is required, and the goods satisfy all other requirements of this note; or
  - (iii) they are goods produced entirely in the territory of Canada, Mexico and/or the United States exclusively from originating materials; or
  - (iv) they are produced entirely in the territory of Canada, Mexico and/or the United States but one or more of the non-originating materials falling under provisions for "parts" and used in the production of such goods does not undergo a change in tariff classification because--
    - (A) the goods were imported into the territory of Canada, Mexico and/or the United States in unassembled or disassembled form but were classified as assembled goods pursuant to general rule of interpretation 2(a), or
    - (B) the tariff headings for such goods provide for and specifically describe both the goods themselves and their parts and is not further divided into subheadings, or the subheadings for such goods provide for and specifically describe both the goods themselves and their parts,

provided that such goods do not fall under chapters 61 through 63, inclusive, of the tariff schedule, and provided further that the regional value content of such goods, determined in accordance with subdivision (c) of this note, is not less than 60 percent where the transaction value method is used, or is not less than 50 percent where the net cost method is used, and such goods satisfy all other applicable provisions of this note. For purposes of this note, the term "material" means a good that is used in the production of another good, and includes a part or an ingredient; or
  - (v) they are goods enumerated in subdivision (u) of this note and meet all other requirements of this note.

(c) Regional value content. Except as provided in subdivision (c)(iv) of this note, the regional value content of a good shall be calculated, at the choice of the exporter or producer of such good, on the basis of either the transaction value method set out in subdivision (c)(i) or the net cost method set out in subdivision (c)(ii).

(i) Transaction value method. The regional value content of a good may be calculated on the basis of the following transaction value method:

$$RVC = \frac{TV - VNM}{TV} \times 100$$

where RVC is the regional value content, expressed as a percentage; TV is the transaction value of the good adjusted to a F.O.B. basis; and VNM is the value of non-originating materials used by the producer in the production of the good.

(ii) Net cost method. The regional value content of a good may be calculated on the basis of the following net cost method:

$$RVC = \frac{NC - VNM}{NC} \times 100$$

where RVC is the regional value content, expressed as a percentage; NC is the net cost of the good; and VNM is the value of non-originating materials used by the producer in the production of the good.

(iii) Except as provided in subdivisions (d)(i) and (d)(ii)(A)(2) of this note, the value of non-originating materials used by the producer in the production of a good shall not, for purposes of calculating the regional value content of the good under subdivision (c)(i) or (c)(ii) of this note, include the value of non-originating materials used to produce originating materials that are subsequently used in the production of such good.

(iv) The regional value content of a good shall be calculated solely on the basis of the net cost method set out in subdivision (c)(ii) of this note where--

- (A) there is no transaction value for the good;
- (B) the transaction value of the good is unacceptable under section 402(b) of the Tariff Act of 1930, as amended (19 U.S.C. 1401a(b));
- (C) the good is sold by the producer to a related person and the volume, by units of quantity, of sales of identical or similar goods to related persons (as defined in article 415 of the NAFTA) during the six-month period immediately preceding the month in which the good is sold exceeds 85 percent of the producer's total sales of such goods during that period;
- (D) the good is--
  - (1) a motor vehicle provided for in headings 8701 or 8702, subheadings 8703.21 through 8703.90, inclusive, or headings 8704, 8705 or 8706;
  - (2) identified in annex 403.1 or 403.2 to the NAFTA and is for use in a motor vehicle provided for in headings 8701 or 8702, subheadings 8703.21 through 8703.90, inclusive, or headings 8704, 8705 or 8706;
  - (3) provided for in subheadings 6401.10 through 6406.10, inclusive; or
  - (4) provided for in subheading 8469.11;

- (E) the exporter or producer chooses to accumulate the regional value content of the good in accordance with subdivision (e) of this note; or
  - (F) the good is designated as an intermediate material under subdivision (c)(viii) of this note and is subject to a regional value-content requirement.
- (v) If the regional value content of a good is calculated on the basis of the transaction value method set out in subdivision (c)(i) of this note and a NAFTA party subsequently notifies the exporter or producer, during the course of a verification of the origin of the good, that the transaction value of the good, or the value of any material used in the production of the good, is required to be adjusted or is unacceptable under section 402 of the Tariff Act of 1930, as amended (19 U.S.C. 1401a), the exporter or producer may then also calculate the regional value content of the good on the basis of the net cost method set out in subdivision (c)(ii) of this note.
- (vi) For purposes of calculating the net cost of a good under subdivision (c)(ii) of this note, the producer of the good may--
- (A) calculate the total cost incurred with respect to all goods produced by that producer; subtract any sales promotion, marketing and after-sales service costs, royalties, shipping and packing costs and non-allowable interest costs that are included in the total cost of all such goods; and then reasonably allocate the resulting net cost of those goods to the good;
  - (B) calculate the total cost incurred with respect to all goods produced by that producer; reasonably allocate the total cost to the good; and then subtract any sales promotion, marketing and after-sales service costs, royalties, shipping and packing costs and non-allowable interest costs that are included in the portion of the total cost allocated to the good; or
  - (C) reasonably allocate each cost that forms part of the total cost incurred with respect to the good so that the aggregate of these costs does not include any sales promotion, marketing and after-sales service costs, royalties, shipping and packing costs and non-allowable interest costs;
- provided that the allocation of all such costs is consistent with the provisions regarding the reasonable allocation of costs set out in regulations issued by the Secretary of the Treasury. The term "total cost" means all product costs, period costs and other costs incurred in the territory of Canada, Mexico and/or the United States.
- (vii) Except as provided in subdivision (c)(ix) of this note, the value of a material used in the production of a good shall--
- (A) be the transaction value of the material determined in accordance with section 402(b) of the Tariff Act of 1930, as amended; or
  - (B) in the event that there is no transaction value or the transaction value of the material is unacceptable under section 402(b) of the Tariff Act of 1930, as amended, be determined in accordance with subsections (c) through (h), inclusive, of such section; and
  - (C) where not included under subdivision (A) or (B), include--
    - (1) freight, insurance, packing and all other costs incurred in transporting the material to the location of the producer;
    - (2) duties, taxes and customs brokerage fees on the material that were paid in the territory of Canada, Mexico, and/or the United States; and

- (3) the cost of waste and spoilage resulting from the use of the material in the production of the good, less the value of renewable scrap or by-product.
  - (viii) Except for goods described in subdivision (d)(i) of this note, the producer of a good may, for purposes of calculating the regional value content of the good, designate any self-produced material (other than a component, or material thereof, identified in Annex 403.2 to the NAFTA) used in the production of the good as an intermediate material; provided that if the intermediate material is subject to a regional value-content requirement, no other self-produced material that is subject to a regional value-content requirement and is used in the production of that intermediate material may be designated by the producer as an intermediate material.
  - (ix) The value of an intermediate material shall be--
    - (A) the total cost incurred with respect to all goods produced by the producer of the good that can be reasonably allocated to that intermediate material; or
    - (B) the aggregate of each cost that is part of the total cost incurred with respect to that intermediate material that can be reasonably allocated to that intermediate material.
  - (x) The value of an indirect material shall be based on the Generally Accepted Accounting Principles applicable in the territory of Canada, Mexico, and/or the United States in which the good is produced.
  - (xi) For purposes of this note, the term "reasonably allocate" means to apportion in a manner appropriate to the circumstances.
- (d) Automotive Goods.
- (i) For purposes of calculating the regional value content under the net cost method set out in subdivision (c)(ii) of this note for--
    - (A) a good that is a motor vehicle provided for in tariff items 8702.10.60 or 8702.90.60, or subheadings 8703.21 through 8703.90, inclusive, 8704.21 or 8704.31; or
    - (B) a good provided for in the tariff items listed in Annex 403.1 where the good is subject to a regional value-content requirement and is for use as original equipment in the production of a good provided for in tariff items 8702.10.60 or 8702.90.60, or subheadings 8703.21 through 8703.90, inclusive, 8704.21 or 8704.31,the value of non-originating materials used by the producer in the production of the good shall be the sum of the values of non-originating materials, determined in accordance with subdivision (c)(vii) of this note at the time the non-originating materials are received by the first person in the territory of Canada, Mexico or the United States who takes title to them; that are imported from the outside the territories of Canada, Mexico and the United States under the tariff items listed in Annex 403.1 to the NAFTA and that are used in the production of the good or that are used in the production of any material used in the production of the good.
  - (ii) For purposes of calculating the regional value content under the net cost method for a good that is a motor vehicle provided for in heading 8701, tariff items 8702.10.30 or 8702.90.30, subheadings 8704.10, 8704.22, 8704.23, 8704.32 or 8704.90, or headings 8705 or 8706, or for a component identified in Annex 403.2 to the NAFTA for use as original equipment in the production of the motor vehicle, the value of non-originating materials used by the producer in the production of the good shall be the sum of--

(e) Accumulation.

- (i) For purposes of determining whether a good is an originating good, the production of the good in the territory of Canada, Mexico and/or the United States by one or more producers shall, at the choice of the exporter or producer of the good for which preferential tariff treatment is claimed, be considered to have been performed in the territory of a NAFTA party by that exporter or producer, provided that--
  - (A) all non-originating materials used in the production of the good undergo an applicable tariff classification set out in subdivision (t) of this note,
  - (B) the good satisfies any applicable regional value-content requirement, entirely in the territory of one or more of the NAFTA parties; and
  - (C) the good satisfies all other applicable requirements of this note.
- (ii) For purposes of subdivision (c)(viii) of this note, the production of a producer that chooses to accumulate its production with that of other producers under subdivision (e)(i) shall be considered to be the production of a single producer.

(f) De minimis.

- (i) Except as provided in subdivisions (f)(iii) through (vi), inclusive, a good shall be considered to be an originating good if the value of all non-originating materials used in the production of the good that do not undergo an applicable change in tariff classification set out in subdivision (t) of this note is not more than 7 percent of the transaction value of the good, adjusted to a F.O.B. basis, or, if the transaction value is unacceptable under section 402(b) of the Tariff Act of 1930, as amended, the value of all such non-originating materials is not more than 7 percent of the total cost of the good, provided that--
  - (A) if the good is subject to a regional value-content requirement, the value of such non-originating materials shall be taken into account in calculating the regional value content of the good; and
  - (B) the good satisfies all other applicable requirements of this note.
- (ii) A good that is otherwise subject to a regional value-content requirement shall not be required to satisfy such requirement if the value of all non-originating materials used in the production of the good is not more than 7 percent of the transaction value of the good, adjusted to a F.O.B. basis, or, if the transaction value of the good is unacceptable under section 402(b) of the Tariff Act of 1930, the value of all non-originating materials is not more than 7 percent of the total cost of the good, provided that the good satisfies all other applicable requirements of this note.

- (h) Accessories, spare parts and tools. Accessories, spare parts or tools delivered with the good that form part of the good's standard accessories, spare parts or tools, shall be considered as originating if the good originates and shall be disregarded in determining whether all the non-originating materials used in the production of the good undergo the applicable change in tariff classification set out in subdivision (t) of this note, provided that--
- (i) the accessories, spare parts or tools are not invoiced separately from the good;
  - (ii) the quantities and value of the accessories, spare parts or tools are customary for the good; and
  - (iii) if the good is subject to a regional value-content requirement, the value of the accessories, spare parts or tools shall be taken into account as originating or non-originating materials, as the case may be, in calculating the regional value content of the good.
- (i) Indirect materials. An indirect material shall be considered to be an originating material without regard to where it is produced. The term "indirect material" means a good used in the production, testing or inspection of a good but not physically incorporated into the good, or a good used in the maintenance of buildings or the operation of equipment associated with the production of a good, including the following: fuel and energy; tools, dies and molds; spare parts and materials used in the maintenance of equipment and buildings; lubricants, greases, compounding materials and other materials used in production or used to operate other equipment and buildings; gloves, glasses, footwear, clothing, safety equipment and supplies; equipment, devices and supplies used for testing or inspecting the goods; catalysts and solvents; and any other goods that are not incorporated into the good but whose use in the production of the good can reasonably be demonstrated to be a part of that production.
- (j) Packaging materials and containers for retail sale. Packaging materials and containers in which a good is packaged for retail sale shall, if classified with the good, be disregarded in determining whether all the non-originating materials used in the production of the good undergo the applicable change in tariff classification set out in subdivision (t) of this note, and, if the good is subject to a regional value-content requirement, the value of such packaging materials and containers shall be taken into account as originating or non-originating materials, as the case may be, in calculating the regional value content of the good.

  - (ii) the good satisfies a regional value-content requirement.
- (l) Transshipment. A good shall not be considered to be an originating good by reason of having undergone production that satisfies the requirements of this note if, subsequent to that production, the good undergoes further production or any other operation outside the territories of the NAFTA parties, other than unloading, reloading or any other operation necessary to preserve it in good condition or to transport the good to the territory of Canada, Mexico and/or the United States.

### Chapter 27.

**Chapter rule:** For the purposes of heading 2710, the following processes confer origin:

- (a) Atmospheric distillation—a separation process in which petroleum oils are converted, in a distillation tower, into fractions according to boiling point and the vapor then condensed into different liquefied fractions. Liquefied petroleum gas, naphtha, gasoline, kerosene, diesel/heating oil, light gas oils and lubricating oil are produced from petroleum distillation;
- (b) Vacuum distillation—distillation at a pressure below atmospheric but not so low that it would be classed as molecular distillation. Vacuum distillation is useful for distilling high-boiling and heat-sensitive materials such as heavy distillates in petroleum oils to produce light to heavy vacuum gas oils and residuum. In some refineries gas oils may be further processed into lubricating oils;
- (c) Catalytic hydroprocessing—the cracking and/or treating of petroleum oils with hydrogen at high temperature and under pressure, in the presence of special catalysts. Catalytic hydroprocessing includes hydrocracking and hydrotreating;
- (d) Reforming (catalytic reforming)—the rearrangement of molecules in a naphtha boiling range material to form higher octane aromatics (i.e., improved antiknock quality at the expense of gasoline yield). A main product is catalytic reformat, a blend component for gasoline. Hydrogen is another by-product;
- (e) Alkylation—a process whereby a high-octane blending component for gasolines is derived from catalytic combination of an isoparaffin and an olefin;
- (f) Cracking—a refining process involving decomposition and molecular recombination of organic compounds, especially hydrocarbons obtained by means of heat, to form molecules suitable for motor fuels, monomers, petrochemicals, etc.:
  - (i) Thermal cracking—exposes the distillate to temperatures of approximately 540° C to 650° C for varying periods of time. Process produces modest yields of gasoline and higher yields of residual products for fuel oil blending;
  - (ii) Catalytic cracking—hydrocarbon vapors are passed at approximately 400° C over a metallic catalyst (e.g., silica-alumina or platinum); the complex recombinations (alkylation, polymerization, isomerization, etc.) occur within seconds to yield high-octane gasoline. Process yields less residual oils and light gases than thermal cracking

- (g) Coking—a thermal cracking process for the conversion of heavy low-grade products, such as reduced crude, straight run pitch, cracked tars and shale oil, into solid coke (carbon) and lower boiling hydrocarbon products which are suitable as feed for other refinery units for conversion into lighter products; or
  - (h) Isomerization—the refinery process of converting petroleum compounds into their isomers.
1. A change to headings 2701 through 2703 from any other chapter.
  2. A change to heading 2704 from any other heading.
  3. A change to headings 2705 through 2706 from any other heading, including another heading within that group.

**Heading rule:** For purposes of heading 2707, a chemical reaction is a process (including a biochemical process) which results in a molecule with a new structure by breaking intramolecular bonds and by forming new intramolecular bonds, or by altering the spatial arrangement of atoms in a molecule. The following are not considered to be chemical reactions for the purposes of this definition:

- (a) dissolving in water or other solvents;
  - (b) the elimination of solvents, including solvent water; or
  - (c) the addition or elimination of water of crystallization.
- 3A. (A) A change to subheadings 2707.10 through 2707.91 from any other heading; or  
(B) A change to subheadings 2707.10 through 2707.91 from any other subheading within heading 2707, whether or not there is also a change from any other heading, provided that the good resulting from such change is the product of a chemical reaction.
  - 3B. (A) A change to subheading 2707.99 from any other heading;  
(B) A change to phenols of subheading 2707.99 from within that subheading or any other subheading within heading 2707, whether or not there is also a change from any other heading, provided that the good resulting from such change is the product of a chemical reaction; or

  - 3C. A change to headings 2708 through 2709 from any other heading, including another heading within that group.

**Heading rule:** For the purposes of heading 2710, the term direct blending is defined as a refinery process whereby various petroleum streams from processing units and petroleum components from holding/storage tanks combine to create a finished product, with pre-determined parameters, classified under heading 2710, provided that the non-originating material constitutes no more than 25 percent by volume of the good.

4. (A) A change to heading 2710 from any other heading, except from headings 2711 through 2715;  
(B) Production of any good of heading 2710 as the result of atmospheric distillation, vacuum distillation, catalytic hydroprocessing, catalytic reforming, alkylation, catalytic cracking, thermal cracking, coking or isomerization; or  
(C) Production of any good of heading 2710 as the result of direct blending, provided that (1) the non-originating material is classified in chapter 27, (2) no component of that non-originating material is classified under heading 2207, and (3) the non-originating material constitutes no more than 25 percent by volume of the good.

## Chapter 85.

**Chapter rule 1:** For purposes of this chapter, the term 'printed circuit assembly' means a good consisting of one or more printed circuits of heading 8534 with one or more active elements assembled thereon, with or without passive elements. For purposes of this rule, 'active elements' means diodes, transistors and similar semiconductor devices, whether or not photosensitive, of heading 8541 and integrated circuits of heading 8542 and microassemblies of headings 8543 or 8548.

**Chapter rule 2:** For purposes of this chapter:

- (a) references to 'high definition' as it applies to television receivers and cathode-ray tubes refers to goods having
  - (1) an aspect ratio of the screen equal to or greater than 16:9, and
  - (2) a viewing screen capable of displaying more than 700 scanning lines; and
- (b) the video display diagonal is determined by measuring the maximum straight line dimension across the visible portion of the face plate used for displaying video.

- (a) with respect to a color cathode-ray television picture tube, video monitor tube or video projector tube, an assembly which consists of a glass panel and a shadow mask or aperture grille, attached for ultimate use, which is suitable for incorporation into a color cathode-ray television picture tube, video monitor tube or video projector tube and which has undergone the necessary chemical and physical processes for imprinting phosphors on the glass panel with sufficient precision to render a video image when excited by a stream of electrons; or
- (b) with respect to a monochrome cathode-ray television picture tube, video monitor tube or video projector tube, an assembly which consists of either a glass panel or a glass envelope, which is suitable for incorporation into a monochrome cathode-ray television picture tube, video monitor tube or video projector tube and which has undergone the necessary chemical and physical processes for imprinting phosphors on the glass panel or glass envelope with sufficient precision to render a video image when excited by a stream of electrons.

**Chapter rule 5:** The origin of a television combination unit shall be determined in accordance with the rule that would be applicable to such unit if it were solely a television receiver.
